

- Strict glycaemic control; review anti-diabetic medication at OPD.

WARNING SIGNS - REPORT TO EMERGENCY ROOM IMMEDIATELY

- Recurrence of chest pain or chest heaviness
- Breathlessness (dyspnoea), especially on lying down
- Palpitations (rapid or irregular heartbeat)
- Syncope, dizziness or blackouts
- Bleeding from gums, easy bruising, or black stools (on antiplatelet therapy)

FOLLOW-UP

Cardiology OPD review after 7 days (02/10/2026) with fasting lipid profile and random blood sugar reports. Carry all current medications. Review earlier if any warning signs develop.
