

SUNRISE MULTISPECIALITY HOSPITAL & RESEARCH CENTRE

Reg. No. TN/HOSP/2011/4472 | 14, Anna Salai, Chennai - 600 002 | Phone: 044-2889 5000

DISCHARGE SUMMARY

Patient Name	Mrs. Lakshmi Narayanan	Age / Sex	34 / Female
MRN	51042	IP No.	2026-11288
Ward / Bed	General Medicine, Bed 21	Consultant	Dr. A. Raghavan, MD (Gen. Medicine)
Admission Date	22/09/2026, 9:15 AM	Discharge Date	25/09/2026, 4:30 PM

FINAL DIAGNOSIS

Dengue fever with warning signs, recovering. Thrombocytopenia improving.

CHIEF COMPLAINTS AND HISTORY

Patient presented with high-grade continuous fever of 4 days with retro-orbital headache, myalgia, arthralgia and vomiting. On the day of admission she developed abdominal pain and gum bleeding suggestive of dengue with warning signs. NS1 antigen positive. No comorbidities.

HOSPITAL COURSE

Patient admitted for monitoring and supportive care. Serial haematology: platelets nadir of 68,000/cumm on day 3, rising to 1.24 lakh/cumm on discharge day. Haematocrit stable (maximum 40%). Managed with intravenous crystalloid fluids, antiemetics and paracetamol only. No bleed manifestations after day 2. Afebrile for 36 hours at discharge; orally accepting well.

CONDITION AT DISCHARGE

Afebrile, haemodynamically stable, no active bleeding. BP 110/70 mmHg, PR 88/min.

MEDICATIONS AT DISCHARGE

S.No	Medicine	Dose	Frequency	Instructions
1	Tab. Paracetamol	500 mg	SOS (as needed)	Only if fever or pain; max 4 tablets in 24 hours
2	ORS Sachets	1 litre/day	Daily	Dissolve one sachet in 1 L water; sip through the day
3	Syp. Zincovit	10 mL	OD (once a day)	After food, for 7 days
4	Tab. Doxylamine is NOT advised	-	-	Avoid NSAIDs like Ibuprofen/Diclofenac completely

Do NOT take Aspirin, Ibuprofen or any other NSAID until platelet count normalises.

DIET AND LIFESTYLE ADVICE

- Drink at least 3 litres of fluids daily - water, ORS, coconut water, soups.
- Soft, easily digestible diet; small frequent meals.
- Avoid oily, spicy and heavy food for one week.
- Complete bed rest for 3 days, then gradual activity over the next week.
- Use mosquito repellents and full-sleeve clothing (patient is infective to mosquitoes).

WARNING SIGNS - REPORT TO EMERGENCY ROOM IMMEDIATELY

- Fever returning after a gap of 1-2 days
- Bleeding from gums or nose, black stools, or skin spots
- Severe abdominal pain or persistent vomiting
- Drowsiness, lethargy or cold clammy skin
- Reduced urine output

FOLLOW-UP

Review in General Medicine OPD after 2 days (27/09/2026) for platelet recheck (CBC). Bring this summary and previous reports.
